TITLE : DISPERSION TYPE EL ELEMENT
FURNISHED WITH FLEXIBLE PRINTED
SUBSTRATE

ABSTRACT : PURPOSE: To prevent the removal of printed substrates from a dispersion type EL element and to improve the installing stability of the substrates by forming resins for reinforcement to the installing parts of the dispersion type EL element and the flexible printed substrates.

CONSTITUTION: At the leading-out lead 3a of a display side electrode 3, one end of a flexible substrate 10 is installed with a conductive adhesive 12, and the substrate 10 is installed to a dispersion type EL element 1. And at the corner formed by the side surface of the end of a display side base plate 2 at the installing part of the element 1 and the substrate 10, the side surface of the outer side end of the conductive adhesive 12, and the substrate 10, a resin 14 for reinforcement is formed in about a triangular form in the section. And, to the leading-out lead 6a of an electrode 6 at the rear side, one end of a flexible substrate 11 is attached with a conductive adhesive 13, and the substrate 11 is installed to the element 1. And at the corner formed by the side surface of the end of the base plate 2, the side surface of the outer side end of the conductive adhesive 13, and the substrate 11, a resin 15 for reinforcement is formed in about a triangular form in the section.
